RESTORE THE
flow layout
continuation
behavirous when
in one col if text is
more it goes to
next and curr
when there is
more text in first
then the whole
text

compoent goest to
second this shd not
happen on more text
compoent shd
created in next
column and
remoaint text shd go
insitd that if it fills
then remaingn shd
go in next column
this was

pulgin flow layout is
creaetd with 2
columns (it can be
modifed for multiple
columnsn there is a
setting for that eg
3,4,5) so eg let say i
have crate for 2
columns then i add
text in one then if
text is more

already implemented
earlierbut becoz
some your some
changes it got
removed One more
issue to solve flow
layout issue in this
when
the text flows into
second column but
the issue is

that the 2nd
columnsn have small
black border and if 3
columnsn are there
leaving one column
all columns have
black border
